Opponent Instructions for degree project

The opponent must submit a written remark on the opposition's work, to Canvas latest in the morning on the presentation day. The written remark on the opposition's work must include the following points:

1 Structure

Title - reflects the content of the report?

Summary - so informative that it provides the most important information, without the reader having to read the entire report?

Background – clear description of the background and choice of subject motivated?

Content and disposition - adapted to the reader's knowledge?

Terms - terms and conditions defined and they are used consistently?

Template – followed?

Problem - clearly defined?

Limitation - clearly defined?

Aim - clearly defined?

Method - how methods have been chosen, described and motivated?

Theory – are the work well grounded and connected to theory?

“Work” – investigation and development well described?

Results - presents the results in a clear and objective way?

Analysis – carried out and reported correct? Aim achieved?

Conclusion - drawn relevant and accurate conclusions? Missing any conclusions?

Main thread – is there a main thread throughout the entire report?

2 Formal

Language - choice of words and spelled correctly, (**no spoken language** or **colloquial** terms to be used) and sentences easy to read?

Contents - suitable headings and a good overview of the content?

Layout - are images, tables, figures and appendices well aligned, referenced and used correctly?

3 References

Sources - complete list of sources, each reference given according to the template and the references included in the list referred to in the text?

The chart on the next page shall be used to grade the opposition's work based on if his/her work satisfies points **1-3** as mentioned above. Fill in the column “Status” and write an explanatory comment for each point. Use following numbers for

“**Status**” as follows:

1 – Missing, does not exist

2 – Exist, but not enough

3 – Fulfilled

4 Overall (mandatory)

Final review - summary review of the work. The value of the work scientific and/or industrial? Is it a “**professional**” report? Does the report indicate that the author has understood the problem and how to write a report? Are there any missing parts for understanding? Etc. etc.

Write your final comments on the opposition's work below point **4 “Overall”** on the last page.

	Status	Comment
1 Structure		
<i>Title</i>	Ful-filled	Explicit and clear
<i>Summary</i>	Exist	Informative about the current report but need more explanation for people that has no clue about all the project. Also maybe write the full word/terms of the abbreviation first (like what was done in the introduction) in the summary, to avoid having to go back and forth between the symbols and glossary and the summary
<i>Background</i>	Ful-filled	Clear description and explanation of the background as well as the subject choice
<i>Content & disposition</i>	Ful-filled	Adapted to the reader's knowledge
<i>Terms</i>	Ful-filled	terms and conditions are defined and used
<i>Template</i>	Exist	Lots of double enter, in the template I used specifically said not to do it, I don't know if this template allows it. Same for table, title is below. Figure sometimes in the middle of the page.
<i>Problem</i>	Ful-filled	The problem, as well as limitation and aim is clearly defined
<i>Limitation</i>	Ful-filled	Clear limitations
<i>Aim</i>	Ful-filled	Clear aim and delimitation of the work
<i>Method</i>	Ful-filled	Method has been chosen wisely after reflection and taking into account plus and minuses of it to have an optimum method. Discussion with the company where the thesis was done with enhance the choice as there was some validation from them. The methods were motivated through comparison, research and literature review as well as if they met the needs or not.
<i>Theory</i>	Ful-filled	Yes the theory is solid and refer to
<i>“Work”</i>	Exist	Investigation and development sufficiently described but could use more details and schematics
<i>Results</i>	Ful-filled	Manage to explain the results of the thesis properly
<i>Analysis</i>	Ful-filled	The thesis work is achieved given the resources and time
<i>Conclusion</i>	Exist	Conclusion is okay but could benefit from more details and opening.
<i>Main Thread</i>	Exist	Main thread is there, but sometimes the feeling of loss along it comes back, notably at the end of the “work” part.
2 Formel		
<i>Language</i>	Ful-filled	No errors I could find, good language and respect of thesis grammar
<i>Contents</i>	Ful-filled	Correct content and headings
<i>Layout</i>	Exist	Yes, the tables and figures are correct but, they are sometimes in the middle of the page and table title is below instead of above. Everything is well referenced

3 References		
<i>Sources</i>	Ful-filled	A lot of references and good use of them as well as a well-documented thesis, but too much of online reference, the template I used said only 3 online references maximum, I don't know for this template.

4 Overall

The thesis clearly presents the design of an EMI-resilient sensor interface for Procada AB's additive manufacturing system.

It addresses a real problem in the industry with a professional and structured approach.

It is both relevant for science and the industry especially in its potential to enhance reliability in high-EMI environment.

The Author show an understanding of the subject, problems, technical requirement, and the engineering approach.

The report is comprehensive, professional, and fulfil the requirement for a master's thesis level. However, having practical validation and quantified results could be an improvement.
